DETAILED ACTION

Allowable Subject Matter

1. Claims 2-6 and 8-12 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claim 1 and 7 is rejected under 35 U.S.C. 102(b) as being anticipated by Leijon(GB2331869).

Leijon discloses in fig.1 and 2; a power generation system comprising: a rotor (7), and a stator (6) positioned adjacent the rotor. The stator includes a plurality of high voltage stator coil each having, a plurality of metal strands (32); a plurality of vents members (31) positioned adjacent the plurality of metal strands (32); a compact voltage grading means (the metal vents 31 and Conductor 3) contacting each of the plurality of vent members and a plurality of metal stands for grading voltage between the vent members and the metal strands to thereby prevent an over-voltage condition.

Referring to claim 7.

Leijon discloses in fig.2 a high voltage stator coil for a stator of a power generation system comprising: a plurality of metal strands (32) a plurality of vent members (31) positioned adjacent the plurality of metal strands and a low impedance shunt (3) contacting each of the plurality of vent members and the plurality of metal strands for grading voltage between the vent members and the metal strands to thereby prevent and over voltage.

Response to Arguments

3. Applicant's arguments with respect to claim 1-12 have been considered but are moot in view of the new ground(s) of rejection.
